INTRODUCTION

This report contains species lists for vascular plant and vertebrate species entered in the National Park Service's NPSpecies database, by the Alaska Natural Heritage Program (AKNHP) for Denali National Park and Preserve (DENA) as of September 30, 2001.

These lists are a product of AKNHP's cooperative agreement with the Alaska Support Office of the U. S. National Park Service to assist with Step 1 of the Biological Inventory Program in Alaska. The final report titled: *Final Report – Compilation of Existing Species Data In Alaska's National Parks* was produced as an end product of this project, and these lists are a supplement to that report. The final report summarizes the entire project and documents methods and decisions used to populate the NPSpecies and NRBib databases. One of the main tasks undertaken by AKNHP was to populate the NPSpecies database with species information for each park unit; this report is a product of that task. Sixteen separate reports of species lists – one for each of the Alaska Regional Park units – have been produced from the NPSpecies database. For background information on this database and to learn how it was populated see the section titled *Population of the NPSpecies Database* under *Task 7* in the final report.

Each of the different taxonomic groups (plants, fish, birds, mammals, and amphibians) for this Park unit is reported as a separate list. All lists were queried from NPSpecies by Park unit and taxonomic group. The main purpose of these lists is to provide a complete record of all the taxa and the park status given to each species as of the completion of data entry by AKNHP, September 30, 2001. For that purpose the following fields are reported in these lists: TSN number, Scientific name, Common name, and Park status. Additional fields in the list are the numbers of References, Vouchers, and Observations entered as evidence for each species. The taxa for each taxonomic group are arranged by Order-Family and Genus-Species. If a taxonomic group has any species with negative TSN numbers the species are listed under Order: Unassigned - Family: Unassigned.
