

DATA USE ACKNOWLEDGEMENT

1. Alaska Natural Heritage Program (AKNHP) products and services are based on biological data and the objective interpretation of those data by professional scientists. AKNHP does not advocate any particular philosophy of natural resource protection, management, development, or public policy.
2. AKNHP has no natural resource management or regulatory authority. Products, statements, and services from AKNHP are intended to inform parties as to the state of scientific knowledge about certain natural resources, and to further develop that knowledge. They are not intended as natural resource management guidelines or prescriptions.
3. Species range maps, habitat models, occurrence polygons, and other predictions of the spatial distribution of biological resources produced by AKNHP are objective extrapolations of credible data. These products are intended to inform parties of the known occurrence or the likelihood of the presence of those resources, to guide future surveys for those resources, and to test hypotheses regarding habitat quality and abundance. These products are not intended to substitute for field-collected data, nor are they intended to be the sole basis for natural resource management decisions.
4. AKNHP does not portray our databases as exhaustive or comprehensive inventories of rare species or of significant natural features. Field verification of the absence or presence of sensitive species will always be an important obligation of users of our data.
5. AKNHP staff and contractors do not cross or survey privately-owned lands without express permission from the landowner. However, the program cannot guarantee that information provided to us by others was obtained under adherence to this policy.
6. Sources of our data include museum specimens, published and unpublished scientific literature, field surveys, and knowledgeable individuals. AKNHP actively solicits and encourages additions, corrections and updates, new observations or collections, and comments on any of the data we provide.
7. AKNHP staff are available and should be consulted with questions regarding the interpretation or appropriate use of the data that we provide.
8. AKNHP responds equally to all requests for products and services, regardless of the purpose or identity of the requester.
9. The information provided to you by AKNHP is intended for distribution or use only within your department, agency, or business. Subcontractors may have access to the data during the course of any given project, but should not be given a copy for their use on subsequent, unrelated work. AKNHP data are made freely available. Duplication of hard-copy or digital AKNHP products with the intent to sell is prohibited without written consent by AKNHP. Should you be asked by individuals outside your organization for the type of data that we provide, please refer them to AKNHP.

10. AKNHP requires acknowledgement as a data provider in any third-party product involving AKNHP data, and also requires acknowledgement of appropriate staff members as the original authors of species summaries, biological reports, and similar documents in any product referring to or incorporating such documents.
11. Because AKNHP constantly updates and revises its databases with new data and information, products may become less accurate over time and are generally not valid after 1 year. Interested parties are encouraged to obtain the most current information possible from AKNHP, rather than using older products. We add, delete, and change records on a daily basis.
