#### **Outcome score:**

<b>A.</b>	A. Climatic Comparison		
	This species is present or may potentially establish in the following		
	eco-geographic regions:		
1	South Coastal	Yes	
2	Interior-Boreal	Yes	
3	Arctic-Alpine	Yes	

В.	Invasiveness Ranking	Total (Total Answered*)	Total
		Possible	
1	Ecological impact	40 (40)	22
2	Biological characteristic and dispersal ability	25 ( <del>25</del> )	17
3	Ecological amplitude and distribution	25 ( <del>25</del> )	14
4	Feasibility of control	10 ( <mark>10</mark> )	8
	Outcome score	100 (100) <sup>b</sup>	61 <sup>a</sup>
	Relative maximum score†		0.61

<sup>\*</sup> For questions answered "unknown" do not include point value for the question in parentheses for "Total Answered Points Possible."

### A. CLIMATIC COMPARISON:

1.1. Has this species ever been collected or		
documented in Alaska?		
Yes – continue to 1.2		
No	No – continue to 2.1	
1.2. Which eco-geographic region has it been		
collected or documented (see inset map)?		
Proceed to Section B. Invasiveness Ranking.		
	South Coastal	
	Interior-Boreal	
	Arctic-Alpine	

<sup>†</sup> Calculated as <sup>a</sup>/<sup>b</sup>.

Documentation: No *Carduus* species have been recorded in Alaska (AK Weeds Database 2004, Hultén 1968, UAM 2004).

Sources of information:

AK Weeds Database. 2004. Database of exotic vegetation collected in Alaska. University of Alaska, Alaska Natural Heritage Program – US Forest Service – National Park Service Database. Available: http://akweeds.uaa.alaska.edu/

Hultén, E. 1968. Flora of Alaska and Neighboring Territories. Stanford University Press, Stanford, CA. 1008 p.

University of Alaska Museum. University of Alaska Fairbanks. 2004. http://hispida.museum.uaf.edu:8080/home.cfm

- 2.1. Is there a 40% or higher similarity (based on CLIMEX climate matching) between climates any where the species currently occurs and
  - a. Juneau (South Coastal Region)?

Yes – record locations and similarity; proceed to Section B. Invasiveness Ranking

No

- b. Fairbanks (Interior-Boreal)?
  - Yes record locations and similarity; proceed to Section B. Invasiveness Ranking

No

- c. Nome (Arctic-Alpine)?
  - Yes record locations and similarity; proceed to Section B. Invasiveness Ranking

No

 If "No" i answered for all regions, reject species from consideration

Documentation: CLIMEX matching program shows that climatic similarity between Juneau and areas where the species are documented is high. Native range of the species includes Bogolovsk and Sverdlovsk, Russia (Gubanov et al. 1995), which have a 71% and 66% climatic match with Fairbanks, and 67% and 66% climatic match with Nome, respectively. Musk thistle is naturalized along the coastal region of Norway, including the area around Bergen and Kristiansand (Lid and Lid 1994), which have a 73% and 60% similarity with Juneau, respectively. This suggests that if introduced, establishment of species from the genus *Carduus* in South Coastal, Interior-Boreal and Arctic-Alpine ecogeographic regions may be possible.

#### B. INVASIVENESS RANKING

1. ECOLOGICAL IMPACT

- 1.1. Impact on Natural Ecosystem Processes
  - A. No perceivable impact on ecosystem processes

0

B. Influences ecosystem processes to a minor degree (e.g., has a perceivable but mild influence on soil nutrient availability)

3

C. Significant alteration of ecosystem processes (e.g., increases sedimentation rates along streams or coastlines, reduces open water that are important to waterfowl)

7 10

D. Major, possibly irreversible, alteration or disruption of ecosystem processes (e.g., the species alters geomorphology; hydrology; or affects fire frequency, altering community composition; species fixes substantial levels of nitrogen in the soil making soil unlikely to support certain native plants or more likely to favor non-native species)

ive species)

Score 5

U. Unknown

Documentation:

#### Identify ecosystem processes impacted:

Overwintering rosettes can severely inhibit the establishment of other plants. This may retard natural processes of secondary succession (Pitcher and Russo 1988, Rutledge and McLendon 1996). Dead stands can trap snow in winter, increasing soil moisture in the spring (Desrochers et al. 1988).

### Documentation:

# Identify type of impact or alteration:

Infestations in meadows and rangelands reduce foraging sites and hinder the movement of grazing animals (Hull and Evans 1973, Royer and Dickinson 1999, Whitson et al. 2000). Thistle flowers are usually very attractive to insect pollinators and can alter the behavior of native pollinators (Desrochers et al. 1988, Gubanov et al. 2004). Hybridization between musk thistle and plumeless thistle has been reported (Warwick et al. 1989).

#### Documentation:

### Identify type of habitat and states or provinces where it occurs:

Musk thistle invades natural communities in the Midwest, especially in Nebraska and Kansas. Infestations of musk thistle have been observed in areas of tallgrass prairie (Heidel 1987). This species is common in open grassy meadows and spreads into sagebrush, pinyon juniper, and mountain brush communities in Rocky Mountain National Park, Colorado (Rutledge and McLendon 1996). Musk thistle invades midsuccessional sites that were disturbed in the last 11 to 50 years in Pipestone National Monument, Minnesota (Butterfield et al. 1996). It has been observed in fir-spruce habitats in Wyoming (Hull and Evans 1973). Musk thistle infests thousands of hectares of pastures in New Zealand (Jessep 1990). Italian thistle invades chaparral and oak savanna in California (Bossard and Lichti 2000).
