**Outcome score:**

**A. CLIMATIC COMPARISON:**

This species is present or may potentially establish in the following eco-geographic regions:

1. South Coastal
2. Interior-Boreal
3. Arctic-Alpine

This species is unlikely to establish in any region in Alaska

**B. INVASIVENESS RANKING**

Outcome score

| 100 (98)b                                    | 60 a                             |

Relative maximum score †

0.61

*For questions answered “unknown” do not include point value for the question in parentheses for “Total Answered Points Possible.”

† Calculated as a/b.

A. CLIMATIC COMPARISON:

1.1 Has this species ever been collected or documented in Alaska?

Yes – continue to 1.2
No – continue to 2.1

1.2. Which eco-geographic region has it been collected or documented (see inset map)?  *Proceed to Section B. Invasiveness Ranking.*

Yes South Coastal
Yes Interior-Boreal
Yes Arctic-Alpine
2.1. Is there a 40% or higher similarity (based on CLIMEX climate matching) between climates anywhere the species currently occurs and
   a. Juneau (South Coastal Region)?
      Yes – record locations and similarity; proceed to Section B. Invasiveness Ranking
      No
   b. Fairbanks (Interior-Boreal)?
      Yes – record locations and similarity; proceed to Section B. Invasiveness Ranking
      No
   c. Nome (Arctic-Alpine)?
      Yes
      Yes – record locations and similarity; proceed to Section B. Invasiveness Ranking
      No
      – If “No” is answered for all regions, reject species from consideration

Documentation: Using CLIMEX matching program, climatic similarity between Nome and areas where the species is documented is high. Native range of the species includes Røros, Norway, Vytegra, Russia, and Vologda, Russia (Hultén 1968), which has a 76%, 67%, and 63% climatic match with Nome, respectively. Thus establishment of bull thistle in arctic alpine ecogeographic region in Alaska is possible.

Sources of information:

B. INVASIVENESS RANKING

1. ECOLOGICAL IMPACT

1.1. Impact on Natural Ecosystem Processes

A. No perceivable impact on ecosystem processes

B. Influences ecosystem processes to a minor degree (e.g., has a perceivable but mild influence on soil nutrient availability)

C. Significant alteration of ecosystem processes (e.g., increases sedimentation rates along streams or coastlines, reduces open water that are important to waterfowl)

D. Major, possibly irreversible, alteration or disruption of ecosystem processes (e.g., the species alters geomorphology; hydrology; or affects fire frequency, altering community composition; species fixes substantial levels of nitrogen in the soil making soil unlikely to support certain native plants or more likely to favor non-native species)

U. Unknown

Score 3

Documentation:
Identify ecosystem processes impacted:
Bull thistle is known to retard the establishment and growth of conifers following timber harvest, thus impeding succession (Randall and Rejmáneck 1993), but it is generally associated only with highly degraded habitats.

Rational:

Sources of information:

1.2. Impact on Natural Community Structure

<table>
<thead>
<tr>
<th>Score</th>
<th>Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No perceived impact; establishes in an existing layer without influencing its structure</td>
</tr>
<tr>
<td>3</td>
<td>Influences structure in one layer (e.g., changes the density of one layer)</td>
</tr>
<tr>
<td>7</td>
<td>Significant impact in at least one layer (e.g., creation of a new layer or elimination of an existing layer)</td>
</tr>
<tr>
<td>10</td>

1.3. Impact on Natural Community Composition

<table>
<thead>
<tr>
<th>Score</th>
<th>Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>No perceived impact; causes no apparent change in native populations</td>
</tr>
<tr>
<td>3</td>
<td>Influences community composition (e.g., reduces the number of individuals in one or more native species in the community)</td>
</tr>
<tr>
<td>7</td>
<td>Significantly alters community composition (e.g., produces a significant reduction in the population size of one or more native species in the community)</td>
</tr>
<tr>
<td>10</td>
<td>Causes major alteration in community composition (e.g., results in the extirpation of one or several native species, reducing biodiversity or change the community composition towards species exotic to the natural community)</td>
</tr>
<tr>
<td>Unknown</td>
<td></td>
</tr>
</tbody>
</table>

Bull thistle competes with and displaces native species (Bossard et al. 2000).

Rational:

Sources of information:

1.4. Impact on higher trophic levels (cumulative impact of this species on the animals, fungi, microbes, and other organisms in the community it invades)

<table>
<thead>
<tr>
<th>Score</th>
<th>Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Negligible perceived impact</td>
</tr>
<tr>
<td>3</td>
<td>Minor alteration</td>
</tr>
<tr>
<td>7</td>
<td>Moderate alteration (minor reduction in nesting/foraging sites, reduction in habitat connectivity, interference with native pollinators, injurious components such as spines, toxins)</td>
</tr>
<tr>
<td>10</td>
<td>Severe alteration of higher trophic populations (extirpation or endangerment of an existing native species/population, or significant reduction in nesting or foraging sites)</td>
</tr>
<tr>
<td>Unknown</td>
<td></td>
</tr>
</tbody>
</table>

Bull thistle displaces native species, including forage species favored by native ungulates such as deer and elk (Bossard et al. 2000). Phenolic acids found in C. vulgare may serve as defensive or allelopathic agents. Flavonoids and polyacetylenes
may be toxic to insects and mammals. It is a host for numerous pathogenic fungi and viruses (Klinkhamer and De Jong 1993).

Rational:

Sources of information:

Total Possible 40
Total 20

2. BIOLOGICAL CHARACTERISTICS AND DISPERSAL ABILITY

2.1. Mode of reproduction

A. Not aggressive reproduction (few [0-10] seeds per plant and no vegetative reproduction) 0
B. Somewhat aggressive (reproduces only by seeds (11-1,000/m²)) 1
C. Moderately aggressive (reproduces vegetatively and/or by a moderate amount of seed, <1,000/m²) 2
D. Highly aggressive reproduction (extensive vegetative spread and/or many seeded, >1,000/m²) 3
U. Unknown

Score 3

Documentation:
Describe key reproductive characteristics (including seeds per plant):
Average seed production is nearly 4000 per plant (Rutledge and McLendon 1996). Successful individual may produce up to 8000 seeds (Klinlhamer et al. 1988). Though, losses in the seed stage are severe as a result of herbivory on the flowering stem and seed predation and number of seedlings produced per flowering individual is usually low (Klinkhamer and De Jong 1993). Reproduction is entirely by seed.

Rational:

Sources of information:

2.2. Innate potential for long-distance dispersal (bird dispersal, sticks to animal hair, buoyant fruits, wind-dispersal)

A. Does not occur (no long-distance dispersal mechanisms) 0
B. Infrequent or inefficient long-distance dispersal (occurs occasionally despite lack of adaptations) 2
C. Numerous opportunities for long-distance dispersal (species has adaptations such as pappus, hooked fruit-coats, etc.) 3
U. Unknown

Score 3

Documentation:
Identify dispersal mechanisms:
Seeds possess a hairy pappus, and are well suited for wind dispersal (Rutledge and
2.3. Potential to be spread by human activities (both directly and indirectly – possible mechanisms include: commercial sales, use as forage/revegetation, spread along highways, transport on boats, contamination, etc.)

<table>
<thead>
<tr>
<th></th>
<th>Description</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Does not occur</td>
<td>0</td>

<td>3</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**
Species: *Cirsium arvense* (L.) Scop. is declared noxious in nearly all American states and Canadian provinces (Invaders Database System 2003).

**Sources of information:**

2.9. Aquatic, wetland, or riparian species

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Not invasive in wetland communities</td>
<td>0</td>
</tr>
<tr>
<td>B. Invasive in riparian communities</td>
<td>1</td>
</tr>
<tr>
<td>C. Invasive in wetland communities</td>
<td>3</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**
Describe type of habitat:
Bull thistle is most common in recently or repeatedly disturbed areas such as pastures, rangelands, along roads and ditches (Bossard et al. 2000).

**Rational:**
Sources of information:

3. DISTRIBUTION

3.1. Is the species highly domesticated or a weed of agriculture

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. No</td>
<td>0</td>
</tr>
<tr>
<td>B. Is occasionally an agricultural pest</td>
<td>2</td>
</tr>
<tr>
<td>C. Has been grown deliberately, bred, or is known as a significant agricultural pest</td>
<td>4</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**
Identify reason for selection, or evidence of weedy history:
It is a serious weed of pastures and rangelands as well as clearcuts. It is known as a seed contaminant (Bossard et al. 2000, Rutledge and McLendon 1996).

**Rational:**
Sources of information:
3.2. Known level of impact in natural areas

A. Not known to cause impact in any other natural area 0
B. Known to cause impacts in natural areas, but in dissimilar habitats and climate zones than exist in regions of Alaska 1
C. Known to cause low impact in natural areas in similar habitats and climate zones to those present in Alaska 3
D. Known to cause moderate impact in natural areas in similar habitat and climate zones 4
E. Known to cause high impact in natural areas in similar habitat and climate zones 6
U. Unknown 3

Documentation:
Identify type of habitat and states or provinces where it occurs:
In the Pacific Northwest, bull thistle invades foothills and dry meadows (Hitchcock and Cronquist 1973). It occurs in riparian areas, clearcuts, and alder flats in the western hemlock-Sitka spruce zones in Washington, in riparian areas and ponderosa pine communities in Oregon (Zouhar 2002). Bull thistle often dominates in clearcuts in redwood and mixed evergreen forests in California (Bossard et al. 2000, Zouhar 2002). It is found in open meadows and ponderosa pine savannas in Colorado (Rutledge and McLendon 1996).

Sources of information:

3.3. Role of anthropogenic and natural disturbance in establishment

A. Requires anthropogenic disturbances to establish 0
B. May occasionally establish in undisturbed areas but can readily establish in areas with natural disturbances 3
C. Can establish independent of any known natural or anthropogenic disturbances 5
U. Unknown 3

Documentation:
Identify type of disturbance:
Disturbance of soil and vegetation increases greatly seedling emergence and establishment of bull thistle. Even small-scale disturbances such as gopher mounds promote bull thistle establishment and survival (Klinkhamer and De Jong 1988). Spread of bull thistle is favored by trampling and soil disturbance (Rutledge and McLendon 1996). It can also colonize areas in relatively undisturbed grasslands, meadows, and forest openings (Bossard et al. 2000).

Rational:

Sources of information:
3.4. Current global distribution

A. Occurs in one or two continents or regions (e.g., Mediterranean region) 0
B. Extends over three or more continents 3
C. Extends over three or more continents, including successful introductions in arctic or subarctic regions 5
U. Unknown

Score 5

Documentation:

Describe distribution:
Bull thistle is native to Europe, from Britain and Iberia northward to Scandinavia, eastward to western Asia, and southward to northern Africa. It is found on every continent except Antarctica (Zouhar 2002).

Rational:

3.5. Extent of the species U.S. range and/or occurrence of formal state or provincial listing

A. 0-5% of the states 0
B. 6-20% of the states 2
C. 21-50%, and/or state listed as a problem weed (e.g., “Noxious,” or “Invasive”) in 1 state or Canadian province 4
D. Greater than 50%, and/or identified as “Noxious” in 2 or more states or Canadian provinces 5
U. Unknown

Score 5

Documentation:

Identify states invaded:
Bull thistle has been reported in all 50 states and most Canadian provinces (Zouhar 2002). It is considered noxious in 10 states and 2 Canadian provinces (Invaders Database System 2003).

Rational:

Sources of information:
### 4.1. Seed banks

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Seeds remain viable in the soil for less than 3 years</td>
<td>0</td>
</tr>
<tr>
<td>B. Seeds remain viable in the soil for between 3 and 5 years</td>
<td>2</td>
</tr>
<tr>
<td>C. Seeds remain viable in the soil for 5 years and more</td>
<td>3</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**

Identify longevity of seed bank:

*Cirsium vulgare* does not accumulate a persistent seedbank (De Jong and Klinkhamer 1988, Klinkhamer and De Jong 1988). Seed dry-stored, at room temperature, for more than 3 years did not germinate (Klinkhamer and De Jong 1993).

**Rational:**

**Sources of information:**

### 4.2. Vegetative regeneration

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. No resprouting following removal of aboveground growth</td>
<td>0</td>
</tr>
<tr>
<td>B. Resprouting from ground-level meristems</td>
<td>1</td>
</tr>
<tr>
<td>C. Resprouting from extensive underground system</td>
<td>2</td>
</tr>
<tr>
<td>D. Any plant part is a viable propagule</td>
<td>3</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**

Describe vegetative respond:

*Bull thistle* propagates only by seed (Bossard et al. 2000).

**Rational:**

**Sources of information:**

### 4.3. Level of effort required

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Management is not required (e.g., species does not persist without repeated anthropogenic disturbance)</td>
<td>0</td>
</tr>
<tr>
<td>B. Management is relatively easy and inexpensive; requires a minor investment in human and financial resources</td>
<td>2</td>
</tr>
<tr>
<td>C. Management requires a major short-term investment of human and financial resources, or a moderate long-term investment</td>
<td>3</td>
</tr>
<tr>
<td>D. Management requires a major, long-term investment of human and financial resources</td>
<td>4</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**

Identify types of control methods and time-term required:

*Bull thistle* will not withstand cultivation. Mechanically cutting the thistles at the soil surface is an effective method of control. A program that involves cutting should be maintained for at least four years. Chemicals can be used to control bull thistle as well (Rutledge and McLendon 1996).

**Rational:**
Sources of information:
