Outcome score:

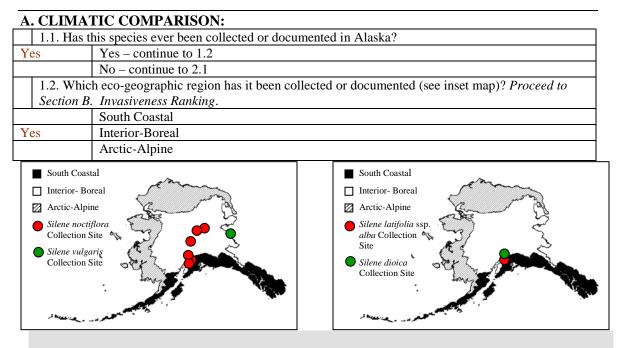

A.	Climatic Comparison		
	This species is present or may potentially establish in the following		
	eco-geographic regions:		
1	South Coastal	Yes	
2	Interior-Boreal	Yes	
3	Arctic-Alpine	Yes	

В.	Invasiveness Ranking	Total (Total Answered*)	Total
		Possible	
1	Ecological impact	40 (40)	13
2	Biological characteristic and dispersal ability	25 (25)	9
3	Ecological amplitude and distribution	25 (25)	13
4	Feasibility of control	10 (10)	7
	Outcome score	100 (100) ^b	42 ^a
	Relative maximum score†		0.42

* For questions answered "unknown" do not include point value for the question in parentheses for "Total Answered Points Possible."

† Calculated as ^a/^b.

SPECIAL NOTE: A number of *Silene* species have been introduced to Alaska. Because these species share similar biological and ecological attributes we treat each species description, distribution and abundance separately, but combine the discussion of ecological impacts and control methods.

Documentation: *Silene noctiflora* has been collected from Fairbanks, Anchorage, Healy, and the Kenai Peninsula (Hultén 1968, UAM 2004). Although this species is reported by Hultén (1968) from Nome and Juneau, these specimens appear to be misidentified (McNeill 1980). *Silene vulgaris* has been documented from the Yukon Territory in the vicinity of Dawson (Cody 1996, UAM 2004). Sources of information: Documentation: *Silene latifolia* ssp. *alba* has been documented from Eklutna Valley and the Matanuska and Susitna valleys in Alaska (AK Weed Database 2004, UAM 2004). *Silene dioica* has been collected from Palmer, Alaska (AK Weed Database 2004).

2.1. Is there a 40% or higher similarity (based on CLIMEX climate matching) between climates any where the species currently occurs and

a. Juneau (South Coastal Region)?

Yes

Yes – record locations and similarity; proceed to Section B. Invasiveness Ranking No

b. Fairbanks (Interior-Boreal)?

Yes – record locations and similarity; proceed to Section B. Invasiveness Ranking No

c. Nome (Arctic-Alpine)?

Yes

Yes – record locations and similarity; proceed to Section B. Invasiveness Ranking No

- If "No" is answered for all regions, reject species from consideration

Documentation: The CLIMEX computer matching program indicates the climatic similarity between Alaska and areas where *Silene noctiflora, S. latifolis* ssp. *alba, S. vulgaris,* and *S. dioica* are documented is moderately high. These species' ranges include Røros and Dombås, Norway (Lid and Lid 1994), which have a 76% and 63% climatic match with Nome; they have been collected from Bergen, Norway which has a 73% climatic match with Juneau. *Silene latifolia* ssp. *alba* and *S. dioica* also have been documented from arctic and subarctic Norway and Finland (Lid and Lid 1994, Thompson 1975). Thus establishment of these non-native *Silene* species in Arctic-Alpine and South Coastal ecogeographic regions is likely.
